San Jacinto River Waste Pits Superfund Site

Location: The western bank of the San Jacinto River, just north of Interstate 10. Houston, Texas.

- Superfund is the federal program that works to clean up hazardous waste sites. The U.S. Environmental Protection Agency (EPA) directs all Superfund activities.
- The first stage of cleaning up the San Jacinto River Waste Pits Superfund Site is set to begin in late April.
 - It is important to clean up the Site because it contains dangerous dioxin waste that has been leaking into the river.
 - A team of engineering and environmental professionals are working on this project.
 - Currently, two companies are working to clean up the Site under the direction of the U.S.EPA. These companies are McGinnes Industrial Maintenance Corporation (MIMC) and International Paper (IP).
- Your safety is important. The Site will be closed to the public.
 - Fences and other barriers will be put up soon to help keep people away from danger.
 - Signs will also be posted around the Site to tell everyone that:
 - people are not allowed on the Site;
 - the area is dangerous; and,
 - people should not eat fish or crab from these waters.
 - Even if you have eaten fish and crab from these waters before, you should NOT eat any more. Fish and crabs from these waters may have dangerous chemicals in them.
- Many community organizations, government agencies, and federal, state and local elected officials are working to tell people about the actions being taken to make this Site safe.
- More work is planned for areas next to the Site. Water and sediment will be tested to find out if they are safe.
